

# AGING IN PLACE

**UNIVERSITY OF BERGAMO,**  
CHL – Centre for Healthy Longevity,  
Aula Magna, ex-Monastero di Sant'Agostino,  
Bergamo (IT)

## INTERNATIONAL WORKSHOP

On **27th and 28th October**, leading international academic experts will gather at the **University of Bergamo** to discuss the theme of **"Aging in Place"**.

They will be guests of the **CHL (Centre for Healthy Longevity)**, the university's research and third mission center, which is celebrating its **first year of activity** by presenting the results of the **CASA (Condizioni Abitative in SAute) project**, founded by PNRR Age.it, to the citizens of Bergamo and professionals in healthcare, urban planning, and both public and private administrative sectors.

The CASA project will conclude with the presentation and public dissemination of the **Living Vulnerability Index for Longevity**, a tool designed to support urban planning and the development of inclusive, **"Age-Friendly"** living.

Bergamo and its University aim to become a benchmark for **medium-sized cities** striving to grow and thrive in the years ahead. This provides a foundation for new guidelines to designed living environments that are both stimulating and protective, fostering healthy longevity.
